## PROJECTOR ON/OFF PROCEDURE

The following is the proper procedure for turning on and off projectors in order to maximize lamp life. If you have any questions with this bulletin or the procedure, please contact Mauell Technical Service at 717-432-8686.

### **Startup Procedures**

Each time the projector is turned off, the lamp cooling fans will remain on for several minutes to cool the lamp. Allow the cooling fan to completely shut off and the lamp to cool prior to turning the projector on again. Turning the projector on while the lamp is hot will result in a hot re-strike of the lamp causing reduced lamp life.

### **Shutdown Procedures**

The projector should be shutdown using the supplied remote control. Doing so allows the lamp cooling fans to remain on to cool the lamp. Do not unplug the power cord or use the hard power switch (if equipped) to turn off the projector until the lamp cooling fans have shut off and the lamp has sufficiently cooled.
